# SETTING UP THE FALCON TO WORK WITH AN **PARADOX** PANEL
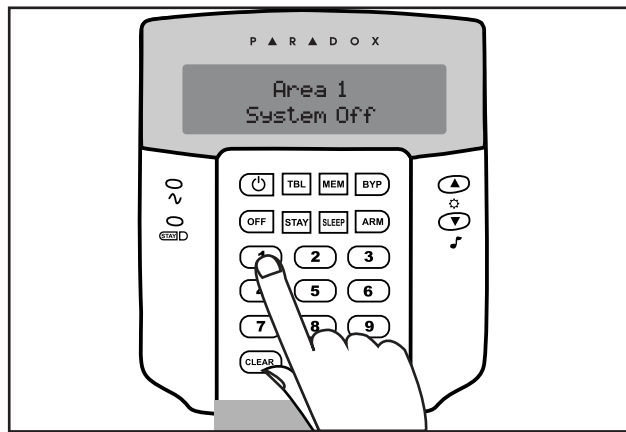

CONNECTING THE FALCON TO THE PANEL

NB. Make sure that the Falcon unit has a firmware version of **4.13** or later. Compatible with the MG & SP Series

1. Connect the Falcon to the Paradox panel through the serial port using the serial cable and adapter marked "PARADOX" provided. Note that the adapter **must** be connected to the panel's serial port.

2. Set the serial port format on the Falcon unit to Paradox. To do this, remove power from the Falcon, hold down the push-button and re-apply power. Push the button to cycle through the panel serial port format options until you reach the Paradox format, indicated by a capital letter "P". Release button. The Falcon will remember the new serial port format.

NB. Remember when arming/disarming with the phone app, use the same pin code that is used when arming/disarming with the keypad.

No programming is needed for the panel to work with the app. Proceed to download the MiRhino app as per the MiRhino Quick Guide provided.
